

## Overview

Designing eye-popping, differentiating visuals has been dramatically improved with Stylus Pro 11.0. You may now incorporate gradient and transparent colors in your charts to customize your look. These advanced graphic features can then be exported to Adobe PDF, creating appealing client reports and marketing materials for printing or emailing. Stylus Pro's Gallery can help you get started.

## In Practice

Combined with new charting features in Stylus Pro 11.0, exporting data into Excel to create fancy charts should rarely be necessary. Included in these new features are the ability to:

- Define and customize **gradient color** fill patterns
- Make objects **transparent** to allow background layers to show through
- Smooth visual distortions with **anti-aliasing**
- Quickly apply advanced styles using the Gallery
- Copy style attributes from one chart to another
- Propagate style attributes throughout a report
- Publish to Adobe PDF or Microsoft PowerPoint

Please note that Gallery elements will be added on an ongoing basis.

## Benefits

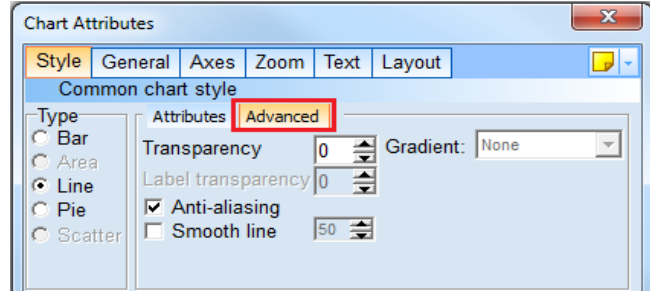

- Enhances clarity in interpreting analysis results
- Reduces the need to use third party tools for creating client-ready materials
- Brings an increased level of sophistication

## Additional Information

On the [Stylus Pro 11.0 website](#) you will find these additional resources:

- Demo Study
