FOR IMMEDIATE RELEASE

Markov Processes International's Enterprise Solutions Transform Reporting Processes Across Financial Service Organizations

MPI's Dynamic Content Distribution Saves Time, Cuts Costs and Refocuses Professional Priorities

SUMMIT, N.J. – June 28, 2005 – Markov Processes International (MPI), a developer of breakthrough analysis and reporting solutions for the financial services industry, today announced MPI Enterprise Solutions to help financial services firms transform how they generate research and reports for employees, clients and prospects.

Utilizing the company's groundbreaking technology platform, MPI Enterprise Solutions combine data integration, an unparalleled analytic engine, customized report design, automated publishing and distribution of dynamic content over the Web. These solutions eliminate repetitive processes, achieve huge cost savings, improve responsiveness and report delivery timelines, while assuring that compliance requirements are met. MPI's enterprise technology is scalable, customizable and can be implemented without programming, IT assistance or significant maintenance. MPI Enterprise Solutions are already being successfully utilized by numerous global financial services organizations.

MPI Enterprise Solutions combine the robust research and reporting capabilities of MPI's Stylus Pro desktop application, with data integration, automation functionality and Web-based distribution of dynamic content to meet the unique reporting needs of large financial organizations. The combination of data integration, a powerful analytic engine, built-in automation and a template-based design structure produce content delivery solutions that are unmatched in the industry.

"Our Enterprise Solutions allow financial organizations to seamlessly integrate their multiple data sources into unique, custom-designed reports with great ease and speed," said Michael Markov, CEO of MPI. "With our solutions, repetitive processes are automated, report publishing is simplified and dynamic content can be distributed across an entire organization."

"MPI's constant innovation and ability to understand our needs is impressive," said Patricia Advaney, Vice President at Diversified Investment Advisors. "They have developed a solution for us that integrates data seamlessly so that we can generate customized reports quickly and easily."

Saves Times, Professional Resource

The automation found in MPI Enterprise Solutions' instant reporting capability produces periodic reports and fulfills unique sales requests with the click of a button. This benefits the entire organization by shaving weeks off the report generation process and allowing investment professionals to focus on critical analysis, marketing and selling of investment products.

Additionally, by linking analysis information and content directly into product presentations and allowing for easy content updates – even on the fly – tedious copying and pasting of content from several different software programs is eliminated.

Also, a firm's compliance group can gain peace-of-mind knowing that reports are unalterable to ensure adherence to stringent compliance rules, yet can also accommodate future modifications when needed.

Transformational Solution

MPI's Enterprise Solutions data integration feature provides the ability to harness data from multiple sources – third party providers as well as in-house sources – and turn it in to a variety of usable reports. The result is the delivery of a variety of communication pieces that display vastly different data within the same report in a seamless fashion – *without the need for IT support.*

About MPI
