

# Enhanced Report Design Feature Factsheet

## Overview

Just as a picture can often tell a thousand words, Stylus Pro's powerful fund analysis is often best described through well-designed reports. Version 11.0 was heavily focused on providing users with even more control over the design of charts and tables, while enabling new means of combining data. The result is a report designer that matches the precision of MPI's analytics.

## In Practice

Many additions and enhancements were made for this release, most notably:

- **Bubble charts** provide a means of varying the size of each point based on an additional data value. Scatter plots are most commonly enhanced in this way, but Stylus Pro allows one to control the size of points in style maps as well.
- Previous versions of Stylus Pro used a colored bar to group together bars in charts. Version 11.0 introduces the long overdue ability to move the **group labels** from the legend to the axis itself.
- Axis labels and table column headings can be rotated, allowing more data to fit into smaller areas with a cleaner layout.
- Many **new chart attributes** for spacing, sizes and more were added to allow finer control over the layout.

## Benefits

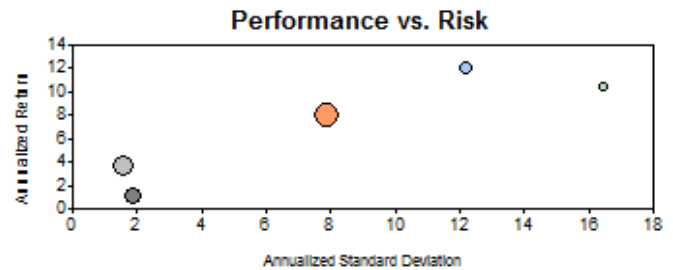

- Creation of more intuitive, informative charts
- Increased control over report layout
- More efficient use of space in printed page
- When combined with new advanced graphics features, ability to create even more eye catching, client-ready reports

## Additional Information

On the [Stylus Pro 11.0 website](#) you will find these additional resources:

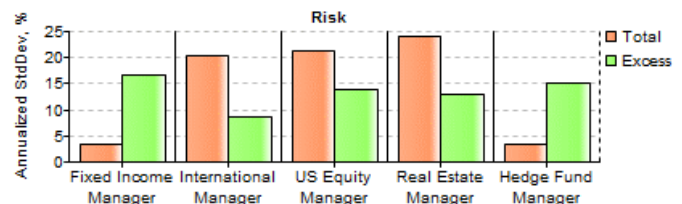

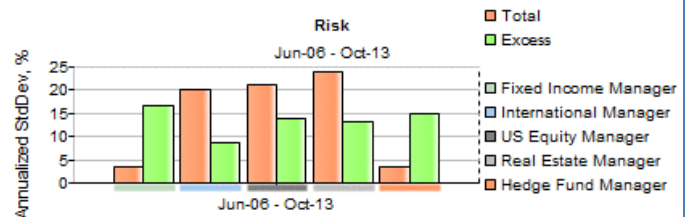

- Demo Study
- Video
- Advanced Graphics Feature Factsheet

## Bubble Charts

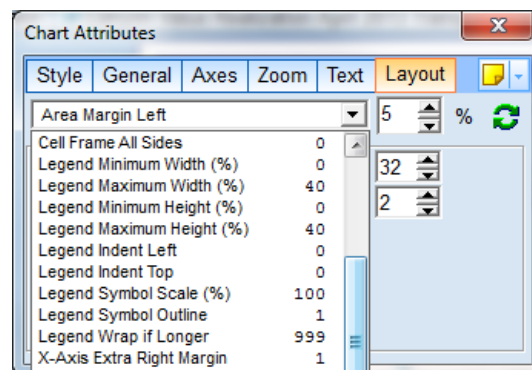

- Calamos Growth (Mstar Rating: 1)
- Stadium Market Opportunity (Mstar Rating: 2)
- Delaware Limited-Term Diversified (Mstar Rating: 3)
- JPMorgan Mortgage-Backed Securities (Mstar Rating: 4)
- Catalyst Hedged Futures Strategy (Mstar Rating: 5)

## Improved Group Labels

## New Chart Attributes for Finer Control
